Title Curated Data From The Cancer Genome Atlas (TCGA) as
MultiAssayExperiment Objects

Version 1.0.3

Author Marcel Ramos <marcel.ramos@roswellpark.org>,
Levi Waldron <lwaldron.research@gmail.com>,
Lucas Schiffer <schiffer.lucas@gmail.com>,
Valerie Obenchain <valerie.obenchain@roswellpark.org>,
Morgan Martin <martin.morgan@roswellpark.org>

Maintainer Marcel Ramos <marcel.ramos@roswellpark.org>

Description This package provides publicly available data from The Cancer Genome Atlas (TCGA) Bioconductor MultiAssayExperiment class objects. These objects integrate multiple assays (e.g. RNA-seq, copy number, mutation, microRNA, protein, and others) with clinical / pathological data. The MultiAssayExperiment class links assay barcodes with patient IDs, enabling harmonized subsetting of rows (features) and columns (patients / samples) across the entire experiment.

curatedTCGAData *Create a MultiAssayExperiment from specific assays and cohorts*

Description

Create a MultiAssayExperiment from specific assays and cohorts

Usage

```
curatedTCGAData(diseaseCode = "*", assays = "*", dry.run = TRUE)
```

Arguments

diseaseCode a character vector containing the name(s) of TCGA cohorts
 assays a character vector containing the name(s) of TCGA assays
 dry.run logical (default TRUE) whether to return the dataset names before actual download

Details

This function will check against available resources in ExperimentHub. Currently, only the latest runDate ("2016-01-28") is supported. Use the `dry.run = FALSE` to download remote datasets and build an integrative MultiAssayExperiment object.

Value

a MultiAssayExperiment of the specified assays and cancer codes

Examples

```
curatedTCGAData(diseaseCode = c("GBM", "ACC"), assays = "CNASNP")
```

DLBC

Lymphoid Neoplasm Diffuse Large B-cell Lymphoma

Description
