Package 'MSA2dist'

January 21, 2025

Type Package

Title MSA2dist calculates pairwise distances between all sequences of a DNAStringSet or a AAStringSet using a custom score matrix and conducts codon based analysis

Version 1.10.1

Description MSA2dist calculates pairwise distances between all sequences of a DNAStringSet or a AAStringSet using a custom score matrix and conducts codon based analysis. It uses scoring matrices to be used in these pairwise distance calcualtions which can be adapted to any scoring for DNA or AA characters. E.g. by using literal distances MSA2dist calculates pairwise IUPAC distances.

data("hiv", package="MSA2dist")
## create mask
mask1 <- IRanges::IRanges(start=c(11,41,71), end=c(20,50,80))

hiv.region |> regionused()
```

`string2region` *string2region*

Description

This function subsets a `DNAStringSet` or an `AAStringSet` by a `mask` and `region` given one or both options as `IRanges`.

Usage

```
string2region(seq, mask = NULL, region = NULL, add = TRUE)
```

Arguments

`seq`	`DNAStringSet` or `AAStringSet` [mandatory]
`mask`	`IRanges` object indicating masked sites [default: NULL]
`region`	`IRanges` object indicating region to use for dist calculation (by default all sites are used) [default: NULL]
`add`	indicate if mask and region should be added to `metadata` [default: TRUE]

Value

A `list` object with the following components:
`DNAStringSet` or `AAStringSet`
`regionUsed`
